# SOLID CONNECTION

Industrial multipole connectors for  
use in especially tough environment conditions.

# HELLO WIELAND ELECTRIC

---

**Tradition and innovation - Wieland is representing the synergy of these two guiding principles for more than 100 years.**

At Wieland Electric, we are proud to be the world market leader in electrical connections, and have been focusing on safe and innovative technologies since our founding. The beginnings of our success lie in the legendary Wieland Clamp, the first-ever safe electrical connector. Since then, innovation has pushed us to develop safer and more efficient ways to electrify the world.

Expanding from a component-only manufacturer, we are now one of the leading suppliers of innovative, future-oriented, and complete electrical solutions. We divide our focus into two main areas, Building and Industry. Our Building Solutions focus on decentralized power distribution and pluggable connections in all kinds of architectures and infrastructures. From in-store displays and lighting to hospitals and airports, and any structure in between – you build it, we power it! Our Industry Solutions center around functional safety for machines, industrial networking, and power distribution. At Wieland, we keep your productivity going in mechanical engineering, wind power, material handling, HVAC, and many other industries.

We are at our customers' side in every step of the project, right from the start. Our experts offer consulting, on-site services, and technical support. We see ourselves as service providers, trainers and subject-matter experts.

# REVOS

## HEAVY DUTY CONNECTORS FOR ALL APPLICATIONS.

Heavy duty connectors are specifically designed for use in especially tough environment conditions.

The main areas of use are the automotive industry, in packaging machinery and equipment, as well as for instrumentation, control and automation equipment.

They permit simple and time-saving installation of machinery and equipment. Their housings protect against mechanical impact and prevent entry of spray water and dust. The system's sub-assemblies can undergo a quality check in house, which simplifies installation and commissioning at their end use location.

### FEATURES:

- + SCREW, SPRING-CLAMP, PUSH-IN AND CRIMP CONNECTION TECHNOLOGY
- + DIFFERENT HOUSING SIZES 3 TO 50
- + HOUSING IN LOW AND HIGH DESIGN AVAILABLE
- + 2- TO 216-POLE CONTACT INSERTS
- + VARIOUS HOUSING LOCKS

# REVOS CONTACT INSERTS OVERVIEW

---

## REVOS MINI

---

The contact inserts for the revos MINI connector series are very compact and available with 3 to 12 poles.

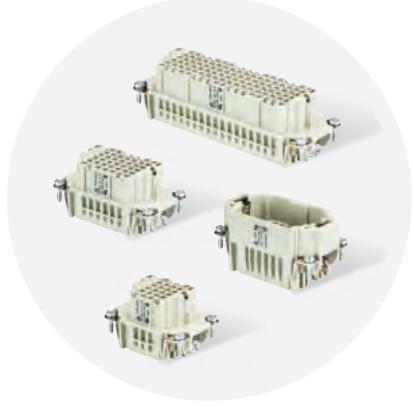

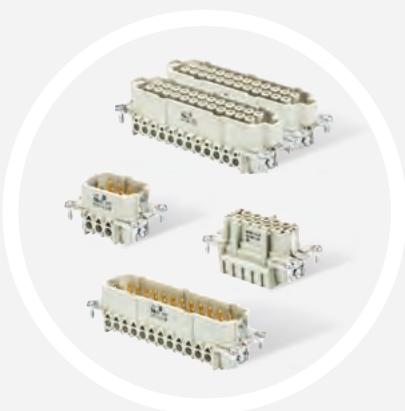

You will find the contact inserts for the revos MINI connectors on pages 30–35.

## REVOS BASIC

---

The proven connectors and multipole adapters are available in 6 to 92 pole design with screw, spring clamp and crimp connection technology.

You will find revos BASIC contact inserts on pages 36–63.

## REVOS DD

---

High contact density in the most compact space – this is what the space-saving contact inserts of revos DD offer. Connection is made with the proven turned crimp contacts, with a diameter of Ø 1.6 mm, which offer a connection range from 0.14 to 2.5 mm<sup>2</sup> at a rated voltage of 250 V (600 V CSA/UL).

You will find revos DD contact inserts on pages 64–65.

## REVOS HD

Contact inserts and multipole adapters with 15 to 64 poles and for currents up to 10 A designed according to DIN EN 175301-801 (previously DIN 46352). The contact inserts are designed in crimp connection technology.

You will find revos HD contact inserts on pages 66–73.

## REVOS POWER

The contact inserts and multipole adapters are designed for  $\geq 16$  A currents; they are also available with mixed contacts and screw connection.

You will find revos POWER contact inserts and terminal block adapters on pages 74–88.

## REVOS FLEX

The modular system for the economical and clever mixture of contact inserts. With this flexible system you can customize your connector, to meet the requirements of your application.

You will find revos FLEX contact inserts on pages 96–112.

## REVOS MODULAR

With interchangeable inserts the revos MODULAR can offer power, signal, and communication connections in a single adapter. Designed to reduce cabling complexity and the amount of individual connections required, this connector system is a flexible and long-term solution for modern industrial environments.

You will find revos MODULAR contact inserts on pages 122–137.

# REVOS HOUSING FAMILIES OVERVIEW

---

## REVOS MINI

---

The design of the housings for the connectors of revos MINI is very compact and available in two materials:

- Die cast zinc alloy
- Polyamide

You will find revos MINI-housings on pages 150–155.

## REVOS BASIC / REVOS BASIC M

---

The housing of the BASIC series are available in size 6 to 48. For convenient connection of the cables this series is also available in increased height design in sizes 6H–24H. The housings are made of die cast aluminum with, silicon-free finish. The connector series revos BASIC M is specifically designed for increased environmental requirements, with stainless steel lever and bolt and chemically stable sealing.

You will find revos BASIC-housings on pages 156–230.

You will find revos BASIC M-housings on pages 232–247.

## REVOS HD

---

The housings of the HD series are available in size 10/15 to 32/50.

You will find revos HD-housings on pages 248–261.

# REVOS SPECIAL MULTIPOLE CONNECTOR DESIGNS

## REVOS Ex

revos Ex multipole connectors are specially designed for use in hazardous areas for underground mining. Their use in zone 1 for intrinsic circuits has been approved by the BVS test institute. The housings for the multipole connectors are manufactured from die cast zinc alloy.

You will find revos Ex-contact inserts on page 92.

You will find revos Ex-housings on pages 262–281.

Operating instructions for Ex plug connectors, see facts&DATA.

## REVOS IT

Data cable feed-throughs – the ideal solution for the installation of pre-assembled cables to enclosures. Sealed and with strain relief.

You will find revos IT products on pages 90–91.

## REVOS MOT / REVOS Q

revos MOT / revos Q plug connectors with plastic housings, simple and easy handling due to its unique latching system.

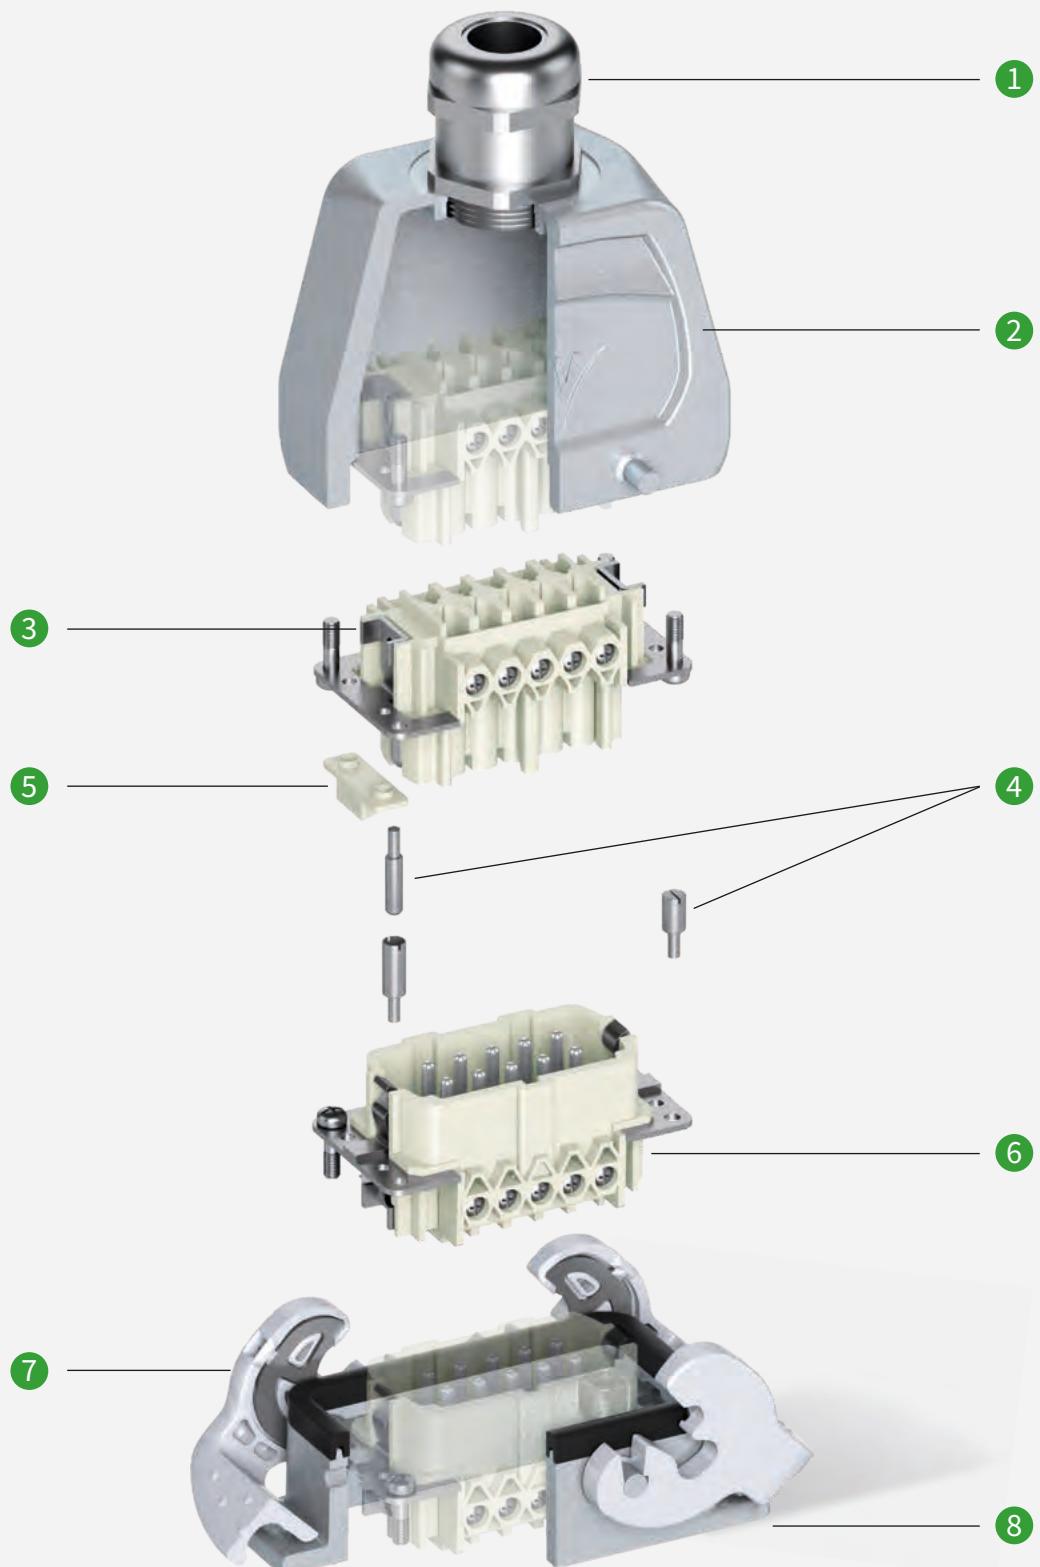

You will find revos MOT products on pages 140–141.

You will find revos Q products on pages 142–147.

# GENERAL DESIGN OF A REVOS INDUSTRIAL MULTIPOLE CONNECTOR

---

## 1 CABLE GLANDS

For revos industrial connectors the following cable glands are available:

- Cable gland without strain relief, protection degree IP54, 7x.xxx.xxxx.0 fully assembled
- Cable glands, protection degree IP68, available as accessories in plastic or brass
- EMC cable glands

## 2 HOODS

Aluminum die cast alloy, silicon-free finish (housings for revos Ex- and revos MINI are manufactured from die cast zinc alloy)

- Low and increased height designs available
- Cable entry at the side, on top or at the front
- With or without locking levers

## 3 FEMALE INSERTS

Available in the following connection techniques:

- Screw connection
- Spring clamp connection
- Push-in connection
- Crimp connection

## 4 CODING ACCESSORIES

- Coding pins
- Female coding pieces
- Coding bolts

## 5 CODING BOLTS

The mechanical coding on the 690 V contact inserts prevents them from being mounted in 500 V housings.

## 6 MALE INSERTS

Available in the following connection techniques:

- Screw connection
- Spring clamp connection
- Push-in connection
- Crimp connection

## 7 LOCKING LEVERS

Single or double locking lever

- Plastic design
- Steel design
- Stainless steel design

## 8 BASES

Aluminum die cast alloy, silicon-free finish (housings for (revos Ex- und revos MINI are manufactured from die cast zinc alloy)

- Low and increased height designs available
- Open-bottom and closed-bottom bases
- Single or double locking lever of plastic, steel or stainless steel
- Coupling for “cable-to-cable connections”

# THE LOCKING MECHANISM OF THE REVOS BASIC INDUSTRIAL MULTIPOLE CONNECTORS

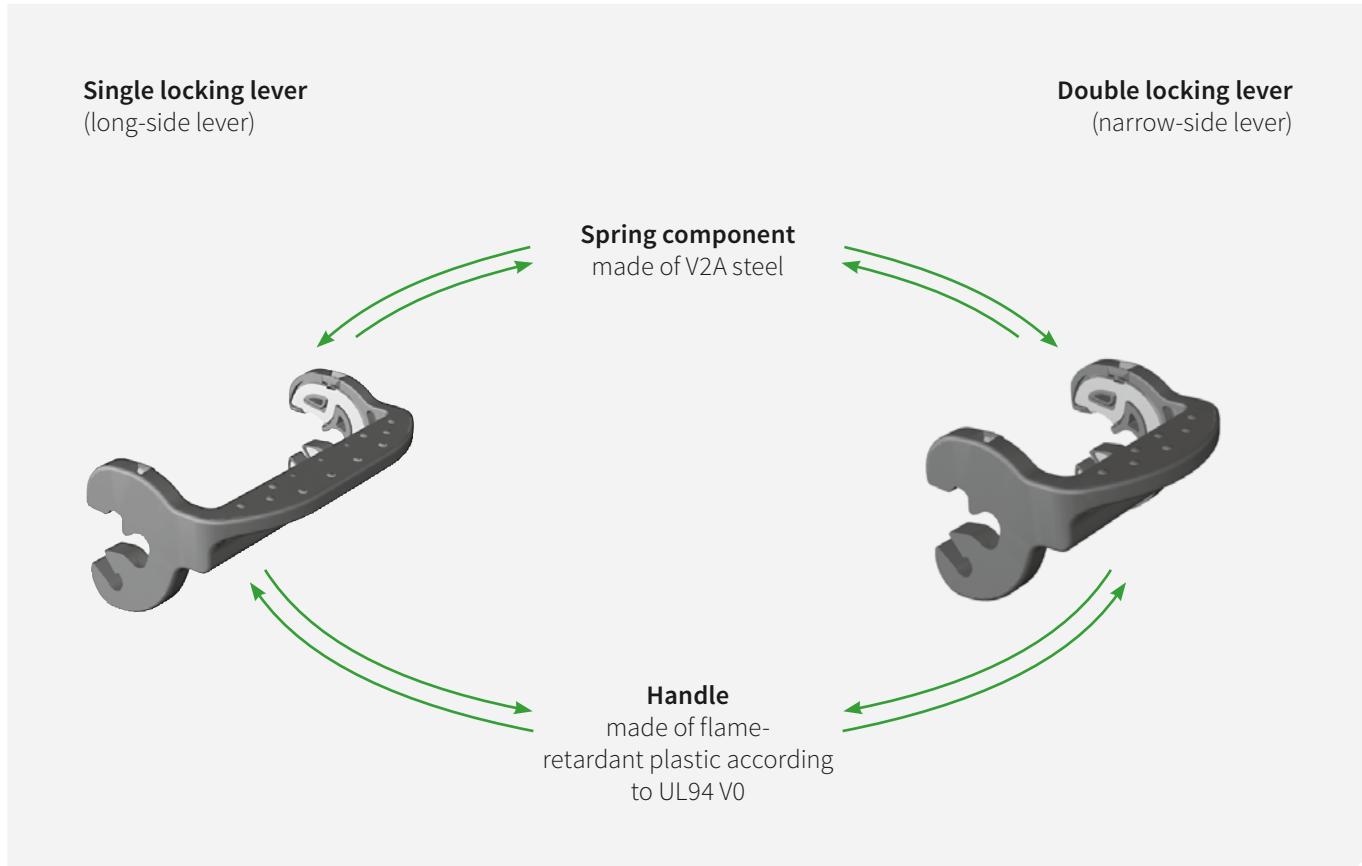

The locking levers secure the mechanical connection between hood and housing. The locking mechanism is also a main determinant of the connector's IP protection rating. Wieland's standard revos BASIC connectors in size 6 to 24 are equipped with locking levers that are made of two components.

The handle consists of flame-retardant and halogen-free plastic material and ensures convenient and almost wear-free locking. The retention force is provided by a spring component that is made of V2A stainless steel and also resists aggressive environmental conditions.

## LOCKING FEATURES:

- Low-wear locking mechanism
- High holding forces
- Plastic material suitable for outdoor applications
- Salt and seawater resistant, UV resistant
- During overhead mounting the lever will remain in the open position
- Replaceable
- Self-extinguishing plastic material according to UL 94 V0

## Locking design

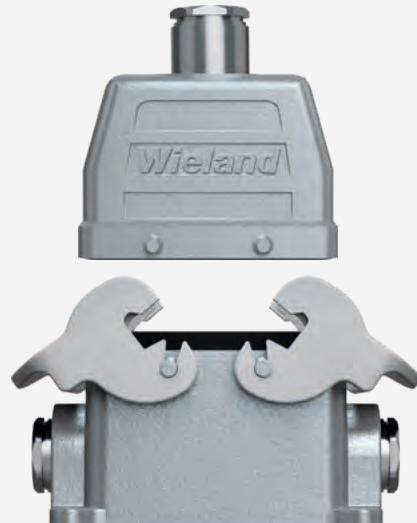

In general we distinguish levers on the hood and levers on the base, as well as single locking levers (on the long side) and double locking levers (on the narrow side). On the opposite hood or base there are studs to which the lever latches.

#### THE FOLLOWING LOCK TYPES ARE AVAILABLE:

**One long-side lever**  
(single locking lever)

**Two narrow-side levers**  
(double locking lever)

#### CONNECTORS FOR CABLE-TO-CABLE COUPLINGS:

**One long-side lever**  
(single locking lever)

**Two narrow-side levers**  
(double locking lever)

#### NOTE:

- Locking levers made of steel or stainless steel are available on request.
- In case of any questions our connector hotline (+49 951 9324-991) will be happy to assist you.

# CONNECTION TECHNOLOGIES

## Screw connection technology

This connection technology is the one most frequently used today. Screw connectors are designed according to EN 60 999/VDE 0609.

### FEATURES OF THIS CONNECTION TECHNOLOGY:

- Operation is simple and easy
- No special tools required
- High-quality connection that can be used for all areas of application
- Non-permanent connection, rewiring possible

Screw terminals are measured in accordance with EN 60 999/VDE 0609.

Please refer to the respective tightening torques from table 4 on page 312.

The contact point can be delivered with or without wire protection.

Clamping bodies with wire protection do not require any preparation of the wires. Clamping bodies without wire protection require appropriate preparation of the wires in case fine-stranded wires are used.

## Crimp connection technology

This connection technology provides the highest quality, but is also the most demanding. The technical requirements for crimp connections are defined in the IEC 60 352-2 standard. Crimp connections must always be produced using a crimping tool that has been designed for the contact. Wieland crimping tools are specifically adapted to the contacts and thus ensure a permanent and corrosion-resistant connection.

### FEATURES OF THIS CONNECTION TECHNOLOGY:

- High-quality connection similar to cold welding
- Consistent repeatability of the crimp connection
- Suitable for automation during pre-assembly of cable harnesses
- Compact design that allows a high contact density
- Special crimping tool required
- Permanent connection

Micrograph of a B crimp

Micrograph of a square crimp

Using the suitable tools when producing crimp connections is essential. Correct and gas-tight connections can only be ensured by tools that are particularly adapted to the contact. Wieland crimping tools compress the contact point with a so-called B crimp or a square crimp to make it gas-tight.

A contact to tool assignment can be found on pages 328–329.

### CONTACT MATERIALS

revos-connectors are available with tin-plated, silver-plated or gold-plated contacts. The basic material is a high-quality copper alloy.

For exact explanations, see pages 318–319.

# Spring clamp connection technology

In the last few years this connection technology has been established as an industrial standard. Spring clamp connectors are designed according to EN 60 999/VDE 0609.

## FEATURES OF THIS CONNECTION TECHNOLOGY:

- Easy handling / No special tools required
- High-quality connection even under vibration
- Non-permanent connection, rewiring possible

For contact inserts with spring clamp connection technology all wire types (solid, stranded, fine-stranded) can be used without special preparation of the wires.

When ferrules are used they must be crimped to the wire by means of a special positively driven crimping tool.

## PUSH-IN CONNECTION TECHNOLOGY

Push-in, the simple, quick and tool-less connection system for prepared conductors.

## FEATURES OF THIS CONNECTION TECHNOLOGY:

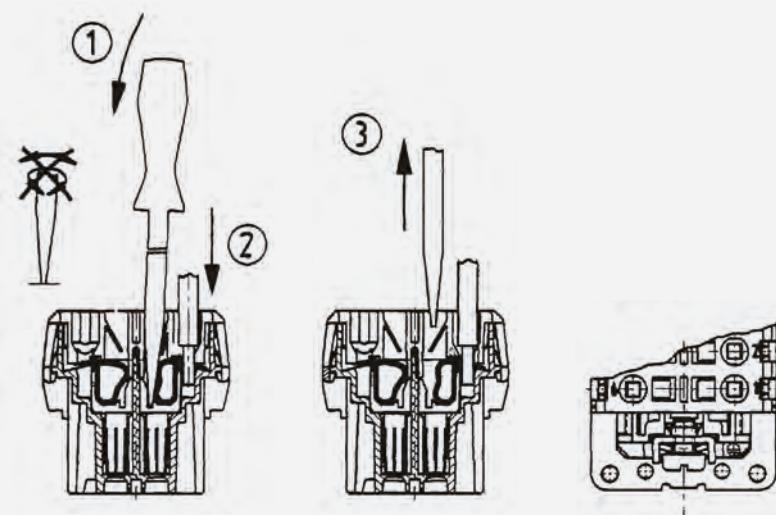

- Extremely short connection time
- Gas-tight and vibration-proof connection
- Testing potentials even in the inserted state

## OPERATING INSTRUCTIONS SPRING CLAMP CONNECTION TECHNOLOGY:

1. Insert the screwdriver using a slight curving motion into the rectangular opening.
2. Open the clamping body.  
The screwdriver will stay in position, and hold the clamping body open.
3. Insert the wire into the round wire entry guide and remove the screwdriver.

**Screwdriver:** 0.6 mm x 3.5 mm

**Part number:** 06.502.4000.0

# HOUSING SERIES REVOS BASIC

# PRODUCT MATRIX

The revos product matrix provides an overview of the available families of contact inserts and their matching housing series.

Horizontally you can find the contact inserts sorted per family and with indications for rated voltage, rated current and connection technology.

Vertically the housing series and their variations in size are shown. Matching combinations are found in the matrix.

The restrictions of the revos FLEX, revos MODULAR and revos HD contact inserts are caused by their depth and cable density inside the housing when fully equipped with contact inserts.

In case of any questions regarding these combinations, our connector hotline (+49 951 9324-991) will be happy to assist you.

# REVOS CONTACT INSERTS

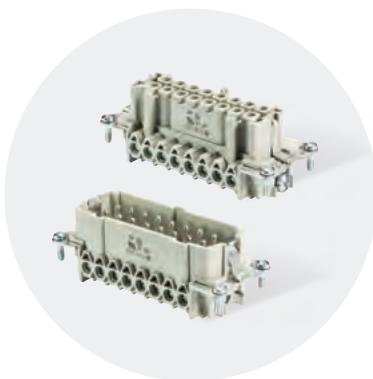

The contact inserts perform the task of distributing power and signals. The contact inserts are available as 2 to 216-pole models. They are suitable for currents from 4 to 150 A and for voltages up to 5.5 kV.

## REVOS MINI

For use in tight spaces.

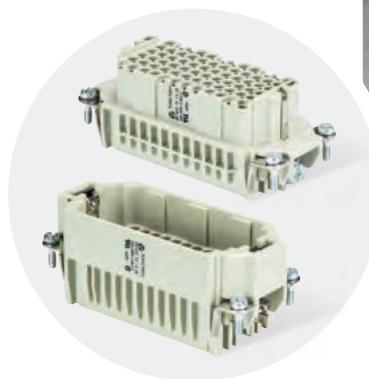

- Connection technology: Screw and crimp connection
- Rated current up to 16 A
- Rated voltage up to 690 V
- Number of poles from 3 to 12

## REVOS BASIC

For the harshest environmental conditions.

- Connection technology: Screw-in, push-in, spring-cage and crimp connection
- Rated current 16 A
- Rated voltage up to 830 V
- Number of poles up to 96

## REVOS DD

High contact density even in the most confined spaces.

- Connection technology: Crimp connection
- Rated current 10 A
- Rated voltage 250 V
- Rated impulse voltage 2.5 kV

## REVOS HD

For multi-pole connectors.

- Connection technology: Screw and crimp connection
- Rated current to 16 A
- Rated voltage 250 V + 400 V
- Number of poles: 15, 25, 40, 64 / 10, 16, 32

### REVOS POWER

Combination of power and control contacts in confined spaces.

- Connection technology: Screw and crimp connection
- Rated current up to 100 A
- Rated voltage up to 690 V

### REVOS FLEX

Modular design for supply, signal, bus, pneumatic and fiber optic lines.

- Connection technology: Screw, spring-cage and crimp connection
- Rated current up to 150 A
- Rated voltage up to 5.5 kV

### REVOS MODULAR

Modular industrial connectors for power, signal + communication.

- Connection technology: Screw, axial, spring-cage and crimp connection
- Rated current up to 40 A
- Rated voltage up to 830 V
- Number of poles: up to 20-pole

# REVOS FLEX – SYSTEM SETUP

# REVOS FLEX

## REQUIREMENT FOR FLEXIBILITY

Machines and systems are increasingly designed and manufactured on a modular basis. This calls for more flexible connectors. A modular insert system replaces standard inserts with a product that is installed as needed and on a modular basis.

The revos FLEX system consists of a socket and plug frame. The frames are available in sizes 6, 10, 16 and 24 and have 2, 3, 5 and 7 slots.

If you need an even more robust connector, then our special housing system revos FLEX COMPACT 1M is the right choice for you. Here you can choose from all modules with single slot to protect your power or data against extreme external influences. For details please refer to page 114.

The modular structure of the revos FLEX connector series makes it possible to combine supply, signal and bus, fiber optic and pneumatic lines in one connector. And you also have the flexibility to mix sockets and plug modules in any frame.

The high-quality die-cast aluminum housing is powder-coated and designed for industrial use in extremely harsh environments. It provides protection against external mechanical impact, foreign objects, moisture, water, oils or other liquids.

### BENEFITS:

- + COMPACT + ROBUST HOUSING
- + LOCKING BAR FROM STAINLESS STEEL
- + CORROSION AND EMC PROTECTION
- + HIGHLY FLEXIBLE DUE TO MODULAR DESIGN
- + IP65, IP68 (3 M/10 H) AND IP69K

#### POWER

The power modules can handle 14 A to 150 A and 250 V to 5.5 kV are available as 2-, 3-, 4- and 5-pole versions. With crimp, screw or spring clamp connection technology.

#### SIGNAL

The signal supply modules are available as 10- and 20-pole versions, for 4 A up to 10 A, up to 400 V with crimp connection technology.

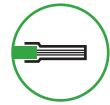

#### COMMUNICATION

No matter whether you need an Ethernet, Profibus DP or a shielded cable connection, we have the right one for you.

## DIMENSIONS

**Male insert**

**Female insert**

## General requirements

- Due to reduced cross sections at PE contacts of frames, the PE contact has to be additionally protected against short circuits by using a protection circuit offering a sufficiently short breaking time (< 0,25 s).
- Parts to be used as connectors, not as plug devices (connector with breaking capacity). Do not mate under current or voltage!

CONTROL CABINET FEEDTHROUGH,  
MACHINE OR MOTOR

FLYING  
CONNECTION

# REVOS FLEX COMPACT 1M – INDESTRUCTIBLE HOUSINGS FOR FLEXIBLE USE

Wieland Electric's revos FLEX COMPACT 1M is a flexible solution for connecting electrical signals.

For example, the pluggable connector system is used as an electrical interface in control cabinets, as a pluggable connector for motor drives or simply as a pluggable extension.

The housing components of the revos FLEX COMPACT 1M series are highly flexible. All revos FLEX module inserts with a module width of 1 can be used. Durch eine simple Vormontage der Modulträger am Schaltschrank werden die Moduleinsätze ganz ohne Werkzeug durch Verrasten im Träger arretiert. The optimized fitting reduces electrical installation time compared with standard housings by up to 30 %. Factory pre-assembled modules save additional time and ensure fast, error-free wiring and installation. The revos FLEX COMPACT 1M series housings are robust and virtually indestructible.

## APPLICATIONS:

- + CONTROL CABINET + MOTOR CONNECTION
- + WIND TURBINES
- + MECHANICAL ENGINEERING AND PLANT CONSTRUCTION
- + CONSTRUCTION MACHINERY
- + SHIPBUILDING
- + FOOD INDUSTRY

- + Easy and quick to fit – time-saving of 30 %
- + Internal gasket therefore particularly protected against UV radiation
- + Cable looms can be pre-manufactured
- + Corrosion protection: 720 hrs NSS according to DIN EN ISO 9227
- + EMC protection: coupling resistance  
< 10 mΩ to 30 MHz, attenuation  
> 70 dB to 100 MHz

# PROVEN PRODUCT CHARACTERISTICS

---

## IP PROTECTION TESTS

- IP 6x IEC 60529 | dust
- IP x5 IEC 60529 | spray water
- IP x8 IEC 60529 | immersion
- II x9k IEC 60529 | high pressure /steam jets

## CORROSION TESTING

according to DIN EN ISO 9227

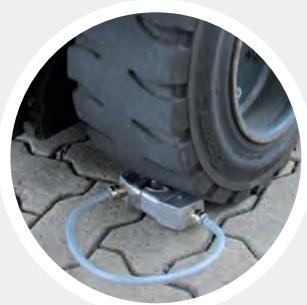

## SHOCK AND VIBRATION TESTING

Requirement according to  
DIN EN 50155 category 1, class B

## IMPACT RESISTANCE TESTING IK 08

## ROLL-OVER TEST

Based on DIN EN 62196-1

## ELECTROMAGNETIC COMPATIBILITY (EMC)

In accordance with the  
IEC 60603-7-3 standard

# ASSEMBLING REVOS FLEX COMPACT 1M

Here: control cabinet feedthrough with a 4-pole + PE, 14 A, 400 V connector.

Assembly  
of hood

1

Insert stripped cable

Connect PE conductor

Engage module insert

Assembly  
of base

2

Click!

Screw on upper shell

Affix base to the control cabinet

Connect PE

Snap in module insert  
from inside

Click!

Fitting the  
connector  
system

3

Click!

Ready!

Detaching  
the contact  
insert

4

If required, detach the contact  
insert with a screwdriver

# REVOS FLEX COMPACT 1M · MODULE CARRIER AND UPPER SHELL

# REVOS MODULAR – SYSTEM DESIGN

# REVOS MODULAR INDUSTRIAL CONNECTORS

Increase productivity with a fully customizable industrial connector that replaces the need for separate connections for power, signals, and communication.

With interchangeable inserts the revos MODULAR can offer power, signal, and communication and fiber optic connections in a single adapter. Designed to reduce cabling complexity and the amount of individual connections required, this connector system is a flexible and long-term solution for modern industrial environments.

The module frame made of die-cast zinc makes it easy to assemble and disassemble the modules and is available in 4 different sizes.

The high-quality die-cast aluminum housing is powder-coated and designed for industrial use in extreme & rough environments. It provides protection against external mechanical impact, the ingress of foreign material such as dust moisture, water, oils or other liquids.

## BENEFITS:

- + POWER, SIGNAL, AND COMMUNICATION IN ONE CONNECTOR
- + FASTER INSTALLATION TIMES
- + FULLY CUSTOMIZABLE
- + EASY INSTALLATION AND REMOVAL
- + REDUCED CABLING COMPLEXITY IS POSSIBLE

### POWER

The power modules can handle 16 A to 40 A and 400 V to 830 V (UL 600 V), and are available in as 3-, 4-, 5-, 8- and 20-pole versions, with crimp or spring clamp connection technology.

### SIGNAL

Transmit a range of signals with these 12- and 17-pole modules, for 10 A and 160 V up to 250 V (UL 600 V) with crimp connection technology.

### COMMUNICATION

Whether you have a standard Ethernet, fast fiber optic, or a shielded cable connection, we've got you covered.

# REVOS HOUSING SERIES

The revos housing components for heavy connectors consist of high-quality plastic, die-cast aluminum or die-cast zinc. Wieland has designed the housings so that they are corrosion-resistant, waterproof and dust-tight and can be used under the harshest environmental conditions.

- ▶ **Housings are available in low and high designs**
- ▶ **Cable outlet sideways or from above**
- ▶ **Housing bases, open or closed**
- ▶ **Single or double locking lever in plastic, steel or stainless steel**
- ▶ **Coupling housing**  
for "on-the-fly connections"

**REVOS MINI**

Small design – for use in confined spaces, in applications for machine, control and switchgear construction, on small motors and in lighting technology for example.

- Housing height 3
- Die-cast zinc and polyamide
- Single locking lever

**REVOS BASIC**

Classic design – meets the toughest requirements and is used in all applications in mechanical and plant engineering.

- Housing sizes 6, 10, 16, 24, 32, 48
- Die-cast aluminum with powder-coated surface
- Single and double locking lever

#### REVOS BASIC M

Designed specifically to meet tightened environmental requirements.

- Housing sizes 6, 10, 16, 24
- Stainless steel bar and pin
- Chemical-resistant seal
- Single locking lever

#### REVOS HD

The high-pole specialist in harsh environments.

- Housing sizes 10/15, 16/25, 32/50
- Single and double locking lever

#### REVOS Ex

The extra protection design – designed specifically for use in potentially explosive areas such as mines.

- Housing sizes 6, 10, 16, 24, 48
- Die-cast zinc
- Single locking lever (sizes 6 and 48) and double locking lever (sizes 10, 16 and 24)

Page 26–27

All Bases on this page are also available in M25 design.  
The fifth digit of the part number always increases by 4 for M25 compared to the corresponding M20 designs.

Example:  
71.341.1035.0 for M20 becomes 71.345.1035.0 for M25

Page 26–27

All Bases on this page are also available in M25 design.  
The fifth digit of the part number always increases by 4 for M25 compared to the corresponding M20 designs.

Example:  
70.341.1035.0 for M20 becomes 70.345.0635.0 for M25

# CONNECTORS FOR INCREASED ENVIRONMENTAL REQUIREMENTS – REVOS BASIC M

Plant construction and engineering as well as construction machinery or wind power stations have the highest requirements for industrial connectors: Vibration, intruding humidity and corrosion are only few of the stress factors electric connection technology has to stand up to.

The revos BASIC M connectors are robust, durable and at the same time more convenient to use. The practical single locking lever lets you actuate the connectors safely even in confined spaces. The stainless steel locking levers are coated with heat-resistant, thermoplastic material. Ergonomic grip grooves provide better handling and ensure that the connector can be actuated under any ambient conditions. The movable locking bolts and the locking lever with rollers are also made of stainless steel and are very resistant to wear and abrasion. The optional aluminum cover ensures increased flexibility on site and protects the connectors in case service is needed.

- + Single locking lever
- + Chemically stable sealing
- + Stainless steel lever and bolt
- + Vibration test acc. to DIN 60068-2-6 (10-150Hz/2g)
- + Vibration test acc. to DIN EN 61373-1-B
- + Methods of exposure to laboratory light sources acc. to DIN EN ISO 4892-2
- + Ozone test acc. to DIN ISO 1431-1:2011-05
- + Corrosion protection (NSS) of >2000 hrs according to DIN EN ISO 9227

### TECHNICAL DATA

Material	Die cast zinc alloy
Surface	powder coated, light blue
Locking levers	zinc-plated steel
Gasket	NBR

### Degree of protection

with latched locking levers	IP54
with appropriate cable glands	IP65
Temperature range	-20 °C ... +60 °C

**Contact inserts** see the product matrix

Page 26–27

### Special conditions for safe use:

- The heavy duty connectors must be attached to a device in such a way that a minimum protection rating of IP54 is maintained in accordance with EN 60529.
- The plug connectors can be used in an ambient temperature ranges of -20 °C to +60 °C.

See section "FACTS&DATA" for handling and assembly of the multipole connectors.

# REVOS ACCESSORIES

We offer a wide range of accessories for our portfolio of heavy-duty plug connectors, such as mounting frames, cover plates, codings, fittings, covers for our housings, labeling accessories and the related tools.

## MOUNTING FRAME/COVER PLATES

The mounting frames of the revos BASIC range are ideal for use in low-voltage switching systems. They are mounted directly on the top hat rail 35 x 15 to DIN EN 50022 in the control cabinet.

## CODING OPTIONS

To prevent mismatching, locking pins, coding pins and coding bushings have been developed for mounting instead of with the usual fixing screws for the contact inserts.

#### CABLE GLANDS

Heavy-duty glands for securely routing and fastening the cable to the connector.

#### PROTECTIVE COVER

Protective cover with or without locking lever to protect the connector when it is not in use.

#### TOOLS

A broad range to ensure the simple and fast assembly of the connector using the correct tool.

# ACCESSORIES · MOUNTING FRAMES FOR REVOS CONTACT INSERTS

The mounting frames of the revos basic family are ideal for use in low-voltage switching systems. They are mounted directly to the 35x15 DIN rail according to DIN EN 50022 inside the control cabinet. Use of the DIN rail mounting frame on a 7.5 mm high DIN-rail 35 x 7.5 in accordance with DIN EN 50022 is only possible if the installation space behind it is free.

## THE SYSTEM HAS THE FOLLOWING ADVANTAGES:

- Reduction of material and mounting costs
- Simple and trouble-free installation
- Wire harness assemblies possible
- Easy troubleshooting with hinged top that enables access to the back of the connector.
- Re-wiring is possible without disconnecting.

The robust contact inserts of the revos family in use worldwide are used for this purpose.

The following contact inserts are available:

- |                                     |  |                                  |
|-------------------------------------|--|----------------------------------|
| • revos BASIC<br>Size 6, 10, 16, 24 | • revos POWER<br>Size 16, 24           | • revos HD<br>40- and 64-pole    |

### TECHNICAL DATA

Material	Polyamide
Color	RAL 7032
Degree of protection	IP65
Flammability	UL94-V0

revos reducer plate adapt the cut-outs of size 24 to sizes 6, 10 or 16.

# ACCESSORIES · CODING OF REVOS MULTIPOLE CONNECTORS

Each family of contact inserts has its unique design. Mismating of the different families' contact inserts is therefore impossible due to the design.

However, if several connectors or the same size and family are mounted directly adjacent to one another, mismating may occur during start-up of the machine or system.

In order to avoid mismating we developed coding bolts, coding pins and female coding pieces that are to be assembled instead of the regular mounting screws of the contact inserts.

Six different codings can be achieved when coding bolts are used.

## CODING BOLTS OF VERSION A

Suitable for the following contact inserts/multipole adapters:

- revos BASIC
- revos POWER
- revos HD
- revos FLEX
- revos EX

that are mounted to the housing at the **front**.

Suitable for:

- Screw termination inserts with part numbers:

70.2XX.XXXX.X  
70.3XX.XXXX.X  
70.4XX.XXXX.X  
72.2XX.XXXX.X  
72.3XX.XXXX.X

- Crimp termination inserts with part numbers:

70.7XX.XXXX.X  
72.7XX.XXXX.X  
73.7XX.XXXX.X

- Spring clamp termination inserts with part numbers:

70.5XX.XXXX.X

- Terminal block adapter inserts (mountable from the front) with part numbers:

70.7XX.XXXX.X  
72.7XX.XXXX.X  
73.7XX.XXXX.X

Coding options also exist for combinations of screw and crimp inserts and terminal block adapters.

## CODING BOLTS OF VERSION B

Suitable for the following contact inserts/multipole adapters:

- revos BASIC
- revos POWER
- revos HD

that are mounted to the housing at the **rear**.

These are mainly multipole adapters that are mounted from the inside of the control cabinet.

Suitable for:

- Combination of screw, crimp, spring-type inserts and clamp adapters in connection with terminal block adapters (mountable from the back of the housing) with part numbers:

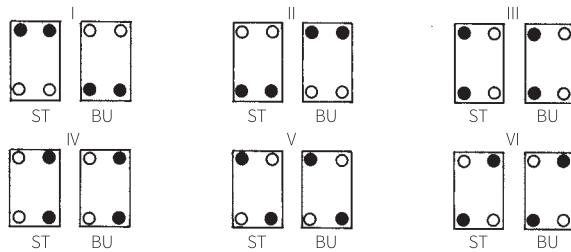

70.9XX.XXXX.X  
72.9XX.XXXX.X  
73.1XX.XXXX.X

# ACCESSORIES · SIX CODING OPTIONS BY MEANS OF LOCKING PINS

With the use of locking pins, there are a total of six combinations for 3-, 6-, 10-, 16-, 24-pin plug connectors.

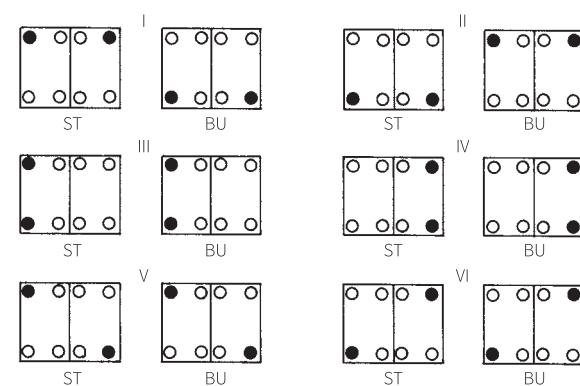

An additional six combinations are possible for the heavy duty connectors with two contact inserts (32- and 48-pin plug connectors).

## ONE CONTACT INSERT

# ACCESSORIES · CODING OPTIONS FOR REVOS MULTIPOLE CONNECTORS

72 coding options by means of coding pin,  
coding key and coding socket

## PART NO. FOR VERSION A

Suitable for the following contact inserts/  
multipole adapters:

- revos BASIC, revos POWER, revos HD,  
revos FLEX, revos EX

that are mounted to the housing at the **front**.

## PART NO. FOR VERSION B

Suitable for the following contact inserts/  
multipole adapters:

- revos BASIC, revos POWER, revos HD

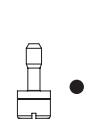

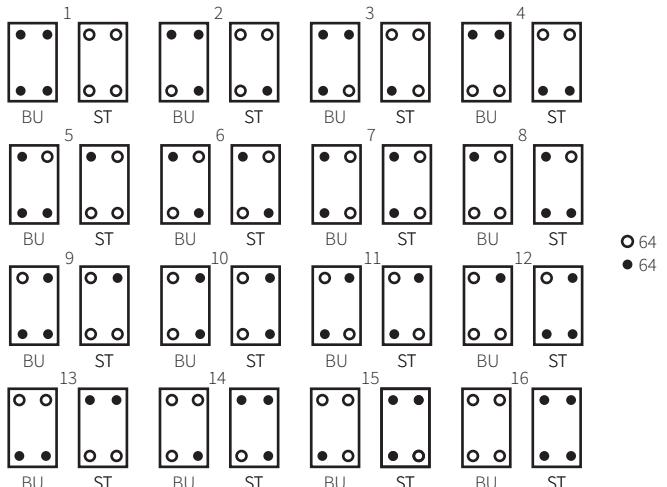

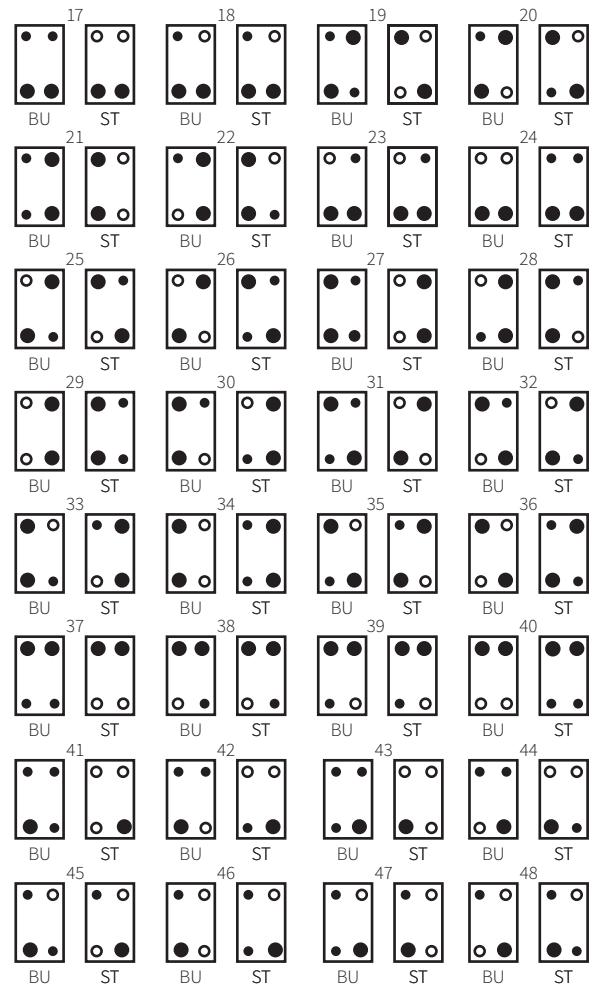

that are mounted to the housing at the **rear**.

The use of coding pins and female coding pieces  
enables 16 different coding options.

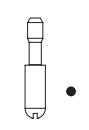

With an additional coding bolt up to 72 coding  
options are possible.

All mounting screws must be replaced by the  
coding components.

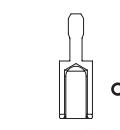

With 15- or 25-pin plug connectors of the series  
73.7 ... 16 coding options result, because the  
coding pin cannot be used here.

### CURRENT LOAD CAPACITY OF CABLES OR LINES

Recommended values for current load capacity of cables or lines for fixed installation and open-air installation should be taken from DIN VDE 0298 Part4/08.2003

# TIGHTENING TORQUE

## Tightening torque of screw connections

Extract from DIN EN 60947-1 (VDE 0660-100):2015

Tightening torque for proving the mechanical tightness of screw connections

**Table 4:** Tightening torques for proving the mechanical tightness of screw connections/terminals

Thread diameter		Tightening torque (Nm)		
Metric standard values	Diameter range	I	II	III
1.6	1.6	0.05	0.1	0.1
2.0	1.6 to 2.0	0.1	0.2	0.2
2.5	2.0 to 2.8	0.2	0.4	0.4
3.0	2.8 to 3.0	0.25	0.5	0.5
-	3.0 to 3.2	0.3	0.6	0.6
3.5	3.2 to 3.6	0.4	0.8	0.8
4	3.6 to 4.1	0.7	1.2	1.2
4.5	4.1 to 4.7	0.8	1.8	1.8
5	4.7 to 5.3	0.8	2.0	2.0
6	5.3 to 6.0	1.2	2.5	3.0
8	6.0 to 8.0	2.5	3.5	6.0
10	8.0 to 10.0	-	4.0	10.0
12	10 to 12	-	-	14.0
14	12 to 15	-	-	19.0
16	15 to 20	-	-	25.0
20	20 to 24	-	-	36.0
24	24	-	-	50.0

**Column I:** Applies for screws without heads that do not protrude from the thread hole and for screws that can only be tightened with screwdrivers with an edge narrower than the screw's thread core diameter.

**Column II:** Applies for nuts and screws that are tightened with screwdrivers.

**Column III:** Applies for nuts and screws that can be tightened with tools other than screwdrivers.

# DEFINITION OF THE IP DEGREES OF PROTECTION

For applications in industrial environments, degrees of protection and standards were defined that specify the environmental impact regarding contact, protection against foreign bodies and humidity to which a system can be exposed without being damaged. The degrees of protection are defined in the IP standard of DIN EN 60 529, DIN VDE 470-1:2014: degrees of protection achieved through housings (IP code).

The IP code consists of a two-digit number that indicates the relevant protection degree. The first digit specifies the protection degree for the protection against contact and foreign bodies while the second digit specifies the protection against water and humidity.

## PRACTICAL NOTES:

For "normal" industrial systems where multipole connectors are used in closed factory halls, protection according to IP54 is normally offered = protected against dust + protected against splashing water. This protection is normally completely sufficient.

For systems in outdoor applications (vehicles, snow guns, etc.) we recommend protection according to IP65 = dustproof + protected against jets of water. A protection according to IP67 or IP68 is required for only a few outdoor applications unless a continuous immersion of the components cannot be avoided.

The following tables are to describe the protection degrees in detail:

Degrees of protection from Table 1 + 2: Protection against contact and foreign bodies

1st	Degrees of protection against access to dangerous parts	Degrees of protection against solid foreign bodies
0	No protection	No protection
1	Protection against contact with large parts of the body, for example the back of the hand	Protection against foreign bodies with a diameter of 50 mm and larger.
2	Protection against contact with the finger of 12.5 mm and larger.	Protection against foreign bodies with a diameter of 12.5 mm and larger.
3	Protection against contact with tools and wires larger than 2.5 mm	Protection against foreign bodies with a diameter of 2.5 mm and larger.
4	Protection against contact with tools and wires larger than 1 mm	Protection against foreign bodies with a diameter of 1 mm and larger.
5	Complete protection against accidental contact	Protection against dust: Penetration of dust is not fully prevented, but dust must not penetrate to such an extent that the equipment's functionality or safety is restricted in any way
6	Complete protection against accidental contact	Dustproof: No penetration of dust possible with a negative pressure of 20 mbar.

# DEFINITION OF THE IP DEGREES OF PROTECTION

**Table 3:** Degree of protection against water (DIN EN 60529:2000)

2nd	<b>Protection against ingress of water</b>
<b>0</b>	No protection
<b>1</b>	Protection against dripping water: Dripping water falling vertically must not have a damaging effect
<b>2</b>	Protection against dripping water up to a tilt of 15°: Dripping water falling vertically must not have a damaging effect, if the equipment is tilted by up to 15°.
<b>3</b>	Protection against spraying water: Water that is sprayed in an angle of up to 60° must not have any damaging effect
<b>4</b>	Protection against splashing water: Water spraying from all directions towards the equipment must not have any damaging effect
<b>5</b>	Protection from jets of water: Jets of water directed towards the equipment from all directions must not have any damaging effect
<b>6</b>	Protection from powerful jets of water: Powerful jets of water that are directed towards the housing from all directions must not have any damaging effect.
<b>7</b>	Protection from temporary immersion in water: Water must not ingress in a quantity that has a damaging effect, if the housing is temporarily immersed in water under standardized pressure and time conditions
<b>8</b>	Protection from continuous immersion in water: Water must not ingress in a quantity that has a damaging effect, if the housing is continuously immersed in water under conditions agreed upon between the manufacturer and the user. The conditions must however be more severe than for key figure 7.
<b>9</b>	Protected against ingress of water from all directions, even with highly increased pressure against the housing. (High-pressure/steam jet cleaner, 80–100 bar)

# DEFINITION OF THE IP DEGREES OF PROTECTION

## DEGREES OF PROTECTION AGAINST WATER, DESIGNATED BY THE SECOND INDEX NUMBER

The second index number defines the level of protection provided by the housing against damaging influences on the equipment resulting from the intrusion of water.

Table 3 gives short descriptions and definitions for the degrees of protection defined by the second index number.

Degrees of protection listed in this table may only be determined using the second index number and not through reference to the brief description or definition.

Up to the second index number 6, the description means that the requirements for all lower index numbers are also fulfilled.

A housing designated with just the second index number 7 or 8 is considered unsuitable for exposure to jet-spray water (designated with the second index number 5 or 6) and does not need to meet the requirements of index numbers 5 or 6, unless equipped with a double designation according to the following table:

The housing meets the test for			
jet-spray water, second index number	Temporary/permanent submersion second index number	Description and label	Area of application
5	7	IPX5 / IPX7	Multipurpose
6	7	IPX6 / IPX7	Multipurpose
5	8	IPX5 / IPX8	Multipurpose
6	8	IPX6 / IPX8	Multipurpose
	7	IPX7	Restricted
	8	IPX8	Restricted

Housings for "multipurpose" use, as specified in the last column, must meet the requirements, both when exposed to jet-spray water or when temporarily or permanently submerged.

Housings for "restricted" use, as specified in the last column, are considered suitable only for temporary or permanent submersion and unsuitable for exposure to jet-spray water.

# CURRENT CARRYING CAPACITY

## Derating behavior of revos industrial multipole connectors

Like any other connector, the revos industrial multipole connector also faces a reduction in the values for the current carrying capacity when the ambient temperature rises.

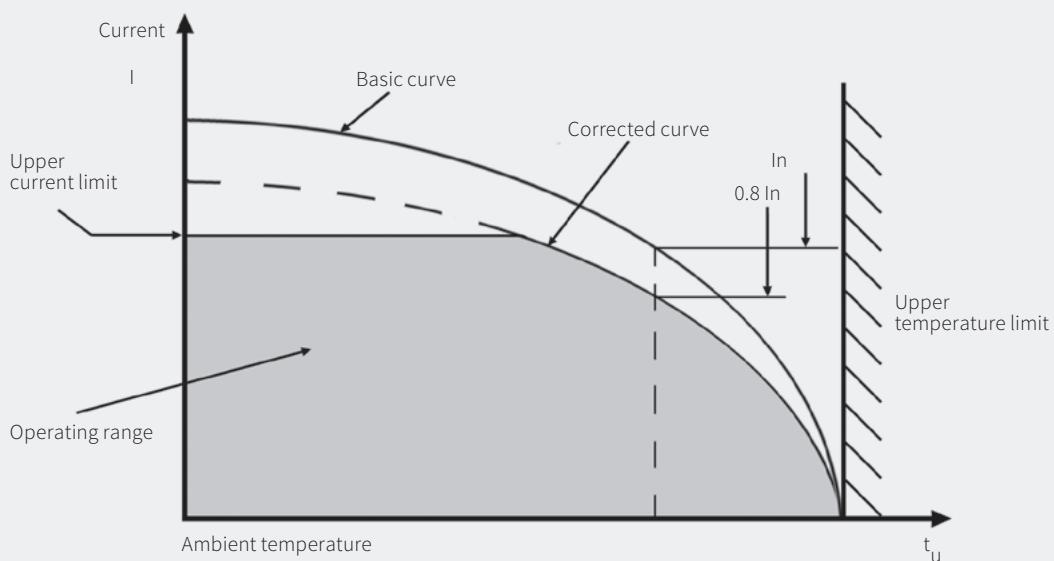

This behavior is called derating behavior. Basic information on the derating behavior of connectors is provided in standard DIN EN 60 512-5-2:2003.

Each contact insert is characterized by its rated current, among other things. The rated current is the current that a connector can carry in an ambient temperature of 40°C, simultaneously continued (not intermittent) over all contacts without exceeding the permissible upper temperature limit.

The derating curve shows the maximum current  $I$  at the given ambient temperature without the connector exceeding the upper temperature limit.

**Curve of current carrying capacity derived from the basic curve**

Source DIN EN 60 512-5-2:2003

# Current carrying capacity of revos industrial multipole connectors

The current carrying capacity for plug connectors is determined and established based on DIN EN 61 984/VDE 0627: 2009 and DIN EN 175 301-801: 2007, if applicable.

During proper use, the contact inserts of the revos series must not be inserted or removed under load or when live.

The contact inserts of the revos series are type-tested according to UL 1977 and C22.2 NO 182.1 and must not be inserted or removed when under load.

The rated current is the maximum operating current. The temperature resistance of the used connection cable must be suitable for the intended purpose. (IEC 60 364-5-52 / DIN VDE 0298-4)

## Remark on double PE connection:

The PE connection always has to be designed equally on both sides to ensure the consistency of the PE connection.

A certified electrician must ensure PE consistency, if connectors with two electrically insulated PE connections are used.

The protection function must be ensured by suitable measures if used in plastic housings or during maintenance work on the connectors outside the metal housing.

## Information on how to change over from PG to metric threads

### BASIC LEGAL CONDITIONS

The European standard EN 50 262 "Metric Cable Glands for Electrical Installation" was ratified on April 01, 1989 by CENELEC (European Committee for Electrotechnical Standardization) and put into force.

The big difference in the new EN standard is it has the character of a safety standard.

As a building standard it only defines the metric thread and its lead.

 **PG threads** are available on request!

# SELECTION CRITERIA + CHARACTERISTICS OF CONTACT PLATINGS

## CONTACT PLATINGS

The core of an electric plug connection is the contact pair, consisting of the socket and plug contacts. Contacts are produced almost exclusively from copper alloys, and Wieland Electric GmbH uses contact platings made of tin, silver and gold, depending on the product specification:

- Tin is corrosion-resistant
- Silver offers favorable conditions at high current and with cyclical switching processes
- Gold offers protection against aggressive environmental conditions

## SCREW AND CRIMP DESIGN

revos – 16 A plug connector in screw and crimp design are available in all three surface platings, tin, silver and gold.

## SPRING CLAMP DESIGN

revos – 16 A plug connectors with spring clamp contacts are available with silver-plating

## HYBRID PLUG CONNECTORS

revos – hybrid plug connectors are normally supplied in a tin version for  $I \leq 16$  A and in a silver-plated version for  $I > 16$  A.

## MULTIPOLE ADAPTERS

revos – 16 A multipole adapters are normally available tin-plated.

## **INSERTS WITH TIN-PLATED CONTACTS:**

Offers excellent resistance to the corrosive gases SO<sub>2</sub> and H<sub>2</sub>S. Tin-plated contacts are especially well suited for transmitting low voltages and current in the millivolt and μA range, but also for typical signal voltages, such as 24 V and lower ampere, or network voltage and corresponding current.

## **INSERTS CONNECTORS WITH SILVER-PLATED CONTACTS:**

Silver-plated contacts extend the operating life of the plug connector when there is strong current, in particular with cyclical motor start-up current that is markedly above the nominal current of the plug connectors. For example, in use on plastic injection molding machines that switch current on and off within seconds. Silver-plated contacts have proven themselves when the maximum current load capacity limit of 16 A was almost surpassed. Here, too, longer life cycles can be achieved.

In the range of high contact temperatures (> 100 °C), silver-plated contacts are preferable to tin-plated contacts.

Aging of silver contacts due to the influence of industrial atmospheres.

During the lifetime of the silver contacts, a silver sulfide layer can form due to the increased affinity of silver for sulfur, which is present in industrial atmospheres in small amounts.

Through the chemical reaction of the silver with the gaseous sulfur in the surrounding air, brown to black layers arise, which result in coloring of the surface.

The chemical reaction of the silver surfaces on the plug systems of Wieland Electric GmbH can be delayed by passivating the silver-plated surfaces at the factory with an additional layer.

This passivation protects the silver temporarily from a reaction with the gaseous sulfur in the surrounding air. Every currently known passivation layer will protect the silver surface for a limited time only, and a silver sulfide layer, including a black-brown coloration, will form.

This soft layer is extremely thin and is broken through when the contacts are mated. As a result, low transmission resistance is assured, even for colored contacts. This has been proven in numerous examinations in our laboratory.

## **INSERTS CONNECTORS WITH GOLD-PLATED CONTACTS:**

In areas where high signal precision is required and the signals are transmitted through extremely small current and low voltage, signal distortions can occur with silver contacts with a silver sulfide layer. To simplify, the following values can be used: For current < 5 mA and voltages up to 5 V, tin-plated or gold-plated contacts are recommended.

But for extreme applications, only gold-plated contacts should be used.

## **CONCLUSION:**

Fundamentally, tin-plated contacts are very good or better suited than silver-plated contacts for all types of signal current. For stronger current, when used with high ambient temperatures or a cyclical electric current, longer service lives can be expected with silver-plated contacts. Gold-plated contacts should be used in the range of very low voltage and current.

Wieland has decades of experience in the area of pluggable connection technology. We offer the best-possible contact with the optimal plating for every application.

# EXPLANATIONS OF APPLICATIONS IN HAZARDOUS AREAS

revos -multipole connectors are designed for special applications in hazardous areas. Their use in zone 0 for intrinsic circuits has been approved by the DEKRA EXAM test institute. The housings for the multipole connectors are manufactured from die cast zinc alloy.

## Operating instructions for the connector series „revos Ex...“

A pluggable connection consists of a hood, a base as well as a female and male insert.

Installation of a pluggable connection must be prepared as follows:

- Closed bottom housings must be fixed with screws to a flat surface using the available bore holes.
- Open-bottom housings must be fixed with screws to a flat surface using the available bore holes.  
Before fixing the housing to the surface, ensure that the seal fixed to the base at the time of delivery is mounted correctly.
- The female insert and male insert must be screwed into the hood (or alternatively screwed into the base) using the screws already attached to the frame of the male or female connector.
- The cables are connected to the male connectors and female connectors using the screw connection with a torque of 0.5 Nm.

The components are made ready for operation by plugging the hood and base together and latching them.

The relevant connectors must be mounted to device in a way that at least protection degree IP54 according to EN 60529 is ensured.

The „revos Ex“ connectors are designed for use in an ambient temperature range at installation site of -20 °C to +60 °C.

### Usage note:

The “revos Ex” plug connector series can be used with a rated voltage of 90 V and a permissible cable cross-section of 0.5 mm<sup>2</sup> to 2.5 mm<sup>2</sup> for the following application areas according to ATEX directive 94/9/EC and the EN 60079-0:2006, EN 60079-11:2007 and EN 50303:2000 standards:

### I M1 Ex ia I

Proof is provided by the marking of the Ex area on the individual components of the connector.

Permissible conductor cross section: 1.5 mm <sup>2</sup> to	2.5 mm <sup>2</sup>	to	16 A
	1.0 mm <sup>2</sup>	to	10 A
	0.75 mm <sup>2</sup>	to	6 A
	0.5 mm <sup>2</sup>	to	3 A

**DEKRA**  
Translation

**2nd Supplement**

(Supplement in accordance with Directive 94/9/EC Annex III number 6)  
to the EC-Type Examination Certificate  
**BVS 03 ATEX E 184 X**

**Equipment:** Industrial multipole connectors revos type Ex\*\*  
**Manufacturer:** Wieland Electric GmbH  
**Address:** 96052 Bamberg, Germany

**Description**

The reason for the issuance of this supplement is to certify the conformity of this equipment with the standard level of EN 60079-0:2006, EN 60079-11:2007 and EN 50303:2000 as well as changing the apparatus category to M1.

The industrial multipole connectors revos type Ex\*\* are rectangular connectors available in a 6-, 10-, 16-, 24-, and 48-pole variant with a screw-type terminal and suitable for a wire range of 0.5 – 2,5mm<sup>2</sup> which allow to connect single-conductors or fine-wired conductors. The upper and lower section of the enclosures are available in an one hand or two hand interlocking variant and as needed for mounting to an equipment or as a free cable joint.

The connector contains only parts which do not affect the type of protection intrinsic safety. Due to the equipments type of construction the different intrinsically safe circuits are separated up to a sum of voltages (peak values) of 90 V.

The Essential Health and Safety Requirements of the modified equipment are assured by compliance with:  
EN 60079-0:2006 General requirements  
EN 60079-11:2007 Intrinsic safety 'I'  
EN 50303:2000 M1 Equipment

The marking of the equipment shall include the following:  
**Ex I M1 Ex ia I**

# OUR SECTOR KNOWLEDGE

We have developed special industry knowledge in a wide variety of specialized fields. This forms the basis of our successful solutions.

Machine and system construction

Conveying technology

Renewable energy

Heating, ventilation and air conditioning systems

# OUR SOLUTIONS RANGE

for machine building and plant engineering.

podis® – Power bus system installed safely and decentralized with high IP rating

RST® – Round connectors offer highest reliability with IP 69 rating

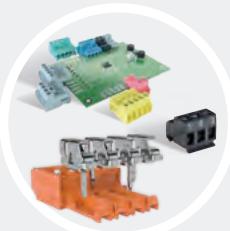

revos – Industrial connectors for reliable power and signal distribution

fasis + selos – Terminal blocks for the perfect fit in small spaces

Components and solutions for the safety of machines and plants

wiecon® – extensive portfolio of pluggable connectors for circuit boards

wipos power supply and wienet switches allow for an industrial network and data technology

wienet – Router and switches for a reliable communication all over the world

# INFO TO GO

All brochures from Wieland Electric are available for download on our website.
